

Relative Layout

Use `layout="relative"` when a container should provide its own coordinate system for overlays, callouts, and anchored badges.

Container-local coordinates

`left="0.2" top="0.45"`

Explicit left/top

`width="35%" height="40%"`

Anchored from right/bottom

`right="0.3"`

Sized by left, right, top, bottom

Default vbox container with a positioned child.

Positional attrs without an explicit position still opt a child into relative placement.

Implicit relative

Page-scope pattern

A page can also use relative coordinates when you want page-local positioning.
