

Pseudo-Class Selectors

This sample shows sibling, row, column, parity, and ordinal pseudo-classes applied through LTML style rules.

:first-child and **:last-child**

First child: green fill and bold text from :first-child.

Middle child: base card styling only.

Last child: rose fill and italic text from :last-child.

Table pseudo-classes

Rows are 0-based from top to bottom, columns are 0-based from left to right. The dashed accents mark **:row-2** and **:col-2**.

r0 c0	r0 c1	r0 c2	r0 c3
<i>r1 c0</i>	<i>r1 c1</i>	<i>r1 c2</i>	<i>r1 c3</i>
r2 c0	r2 c1	r2 c2	r2 c3
<i>r3 c0</i>	<i>r3 c1</i>	<i>r3 c2</i>	<i>r3 c3</i>

Direction Pseudo-Classes

The same first logical child receives the divider. **:dir(ltr)** places it on the right; **:dir(rtl)** places it on the left.

Left-to-right hbox

First logical child The divider follows this panel on its right edge.	Second logical child This panel appears on the physical right.
--	---

Right-to-left hbox

Second logical child This panel appears on the physical left.	First logical child The divider follows this panel on its left edge.
